

# Exercise 1: Create an EC2 Instance

Follow below steps to create an EC2 Instance.

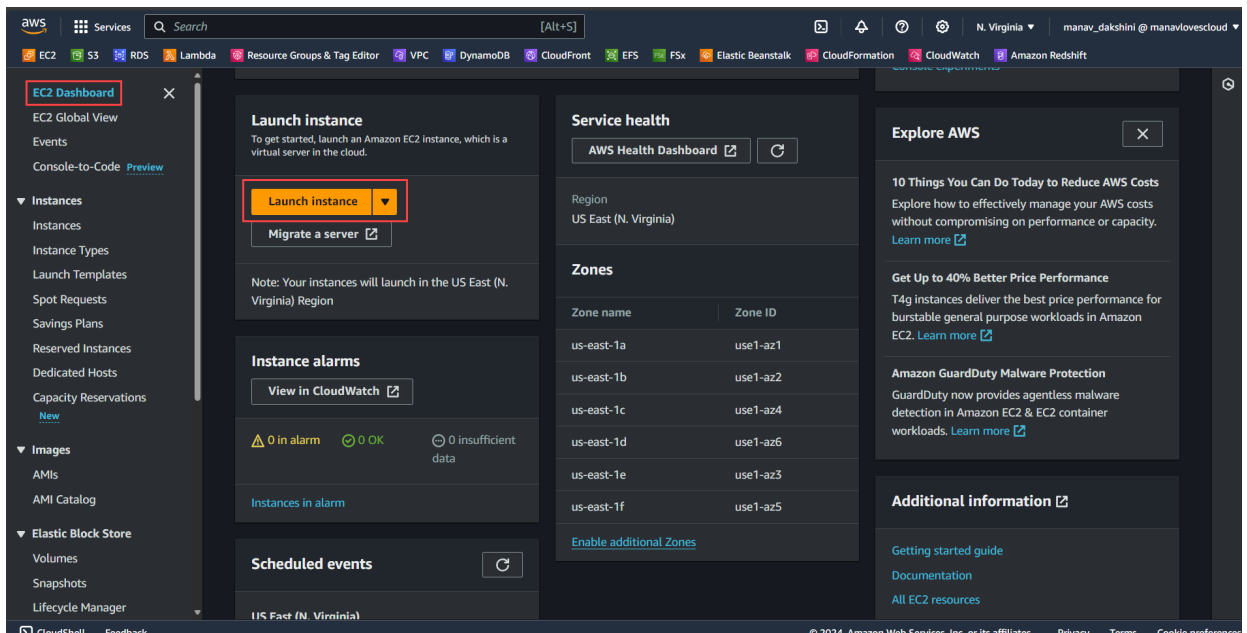

1. Select the region as **US-EAST-1(N.Virginia)** from Drop Down menu.

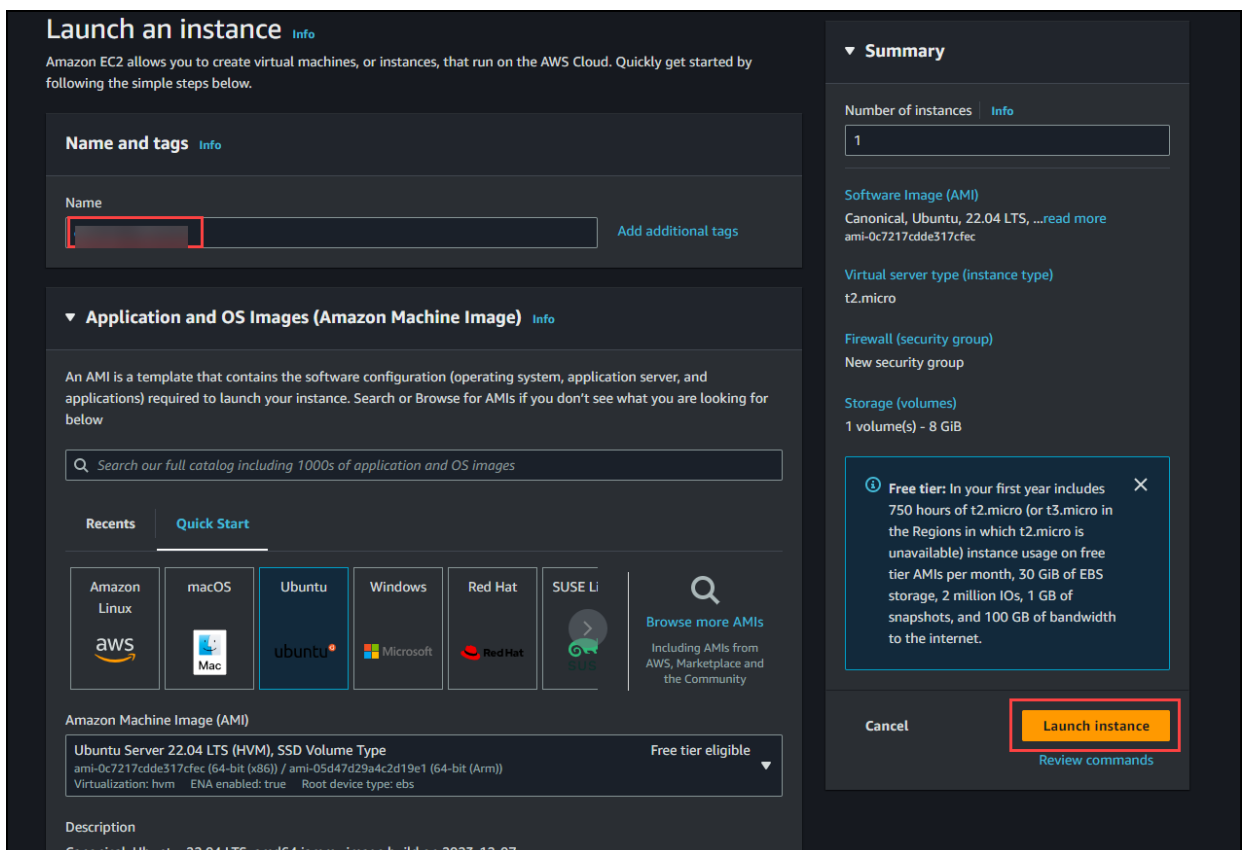

2. At the top of the AWS Management Console, in the search bar, search for the service **EC2**.

3. At the EC2 Dashboard click on **Launch Instance**.

4. Create the Instance with the name odl-user-

5. Create a key pair with name odl-user-

## Create key pair

Key pair name

Key pairs allow you to connect to your instance securely.

odl-user-

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

☒ RSA  
RSA encrypted private and public key pair

☐ ED25519  
ED25519 encrypted private and public key pair

Private key file format

☒ .pem  
For use with OpenSSH

☐ .ppk  
For use with PuTTY

 When prompted, store the private key in a secure and accessible location on your computer. You will need it later to connect to your instance. [Learn more](#)
